

Digitization of Trade Documents

As the world enters a new decade in the Information Age, parts of the shipping industry have made the most of recent digital technological advancements and the resulting data produced.

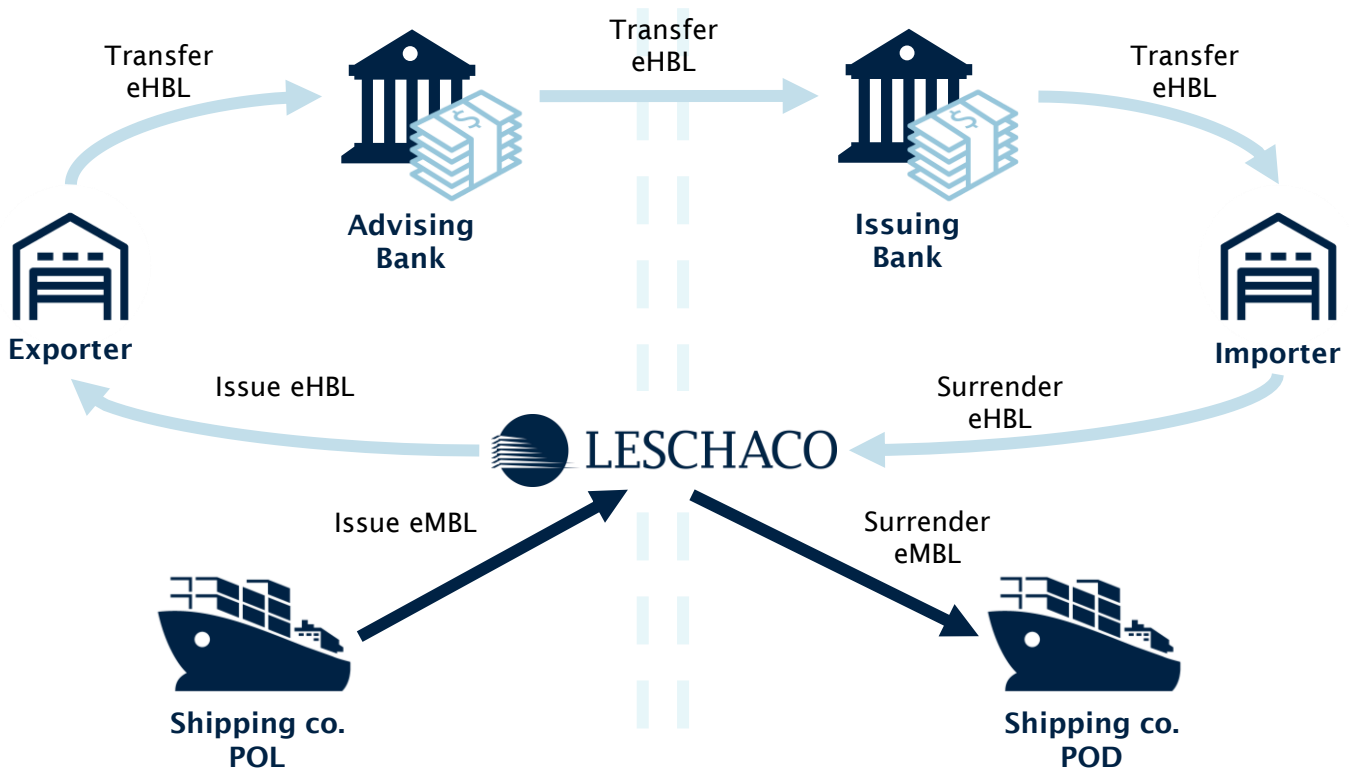

To utilize today's technological capabilities, players in the shipping industry have begun to digitize previously analogue processes.

The Leschaco eBL shall provide an efficient and safe solution for the transportation of maritime and commercial documents but it will not be mandatory.

We of course, can also issue traditional paper bills of lading and courier them to destination.

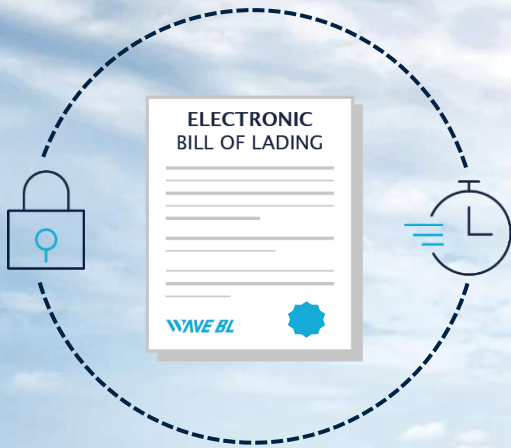

eHBL Process Flow with Letters of Credit / Collections

The LC process remains as is, only the presentation of trade documents is described, where Leschaco eBL powered by WAVE BL allows saving in time and costs.

Payment will be made faster due to electronic submission, instead of courier delivery.

Home office will be supported, shortage of physical staff like driver eliminated and order to cash cycle shortened to physical transit time of cargo.

The right Solution for you powered by **WAVE BL**

Easy to Use

Simple and user-friendly platform that can be mastered within minutes.

Instant Transfer

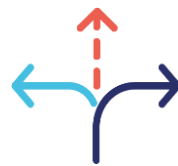

Every transfer takes minutes instead of days.
